Hi Phil,

Thanks for asking, I'm happy to have checked the following.

The colors code uses a Salpeter IMF w/ M_min = 0.1 and M_max = 100.0.

It also uses the Padova group 1994 stellar evolution tracks.

All the magnitudes are on the AB scale.

We can try to get the Chabrier 2003 IMF version (similar to Kroupa 2001 IMF) and include that as an option if need be, but what we have right now uses Salpeter.

-B
